COMPETITIVE PRODUCT ROADMAP

# Build the workflow tool people can trust.

A prioritized checklist based on recurring complaints about Tango, Scribe, Supademo, iorad, Folge, UserGuiding, and similar process-capture products.

## The strategic wedge

Win on capture reliability, editing depth, privacy, portability, and transparent pricing—not automatic screenshots alone.

### Already working

Persistent side panel, cross-tab click capture, ordered screenshots, page context, guide editing, local storage, and a Chrome Store-ready package.

### Biggest market gap

Users cannot trust silent capture failures, dislike cleanup-heavy output, and fear losing data behind expensive or closed platforms.

1. **Reliability**
   Never lose or silently skip a step.
2. **Editing**
   Turn raw capture into polished instructions quickly.
3. **Ownership**
   Keep projects portable, private, and recoverable.
4. **Sharing**
   Let viewers follow guides without friction.

CAPTURE TRUST

# Make recording impossible to doubt.

- [x] **Persistent side panel**
  Keep the live timeline visible while moving between tabs.
- [x] **Ordered screenshots and context**
  Store every click with image, label, page title, URL, and coordinates.
- [ ] **Checkpoint every event**
  Persist each step immediately instead of waiting for capture completion.
- [ ] **Recover interrupted sessions**
  Resume or finalize after an extension, tab, or browser crash.
- [ ] **Visible capture errors**
  Show a clear warning when a click or screenshot fails.
- [ ] **Reliable pause and resume**
  Test switching tabs, windows, and long page loads.
- [ ] **Noise suppression**
  Detect duplicate, accidental, and low-value clicks before import.
- [ ] **Manual “Capture this step”**
  Save a screenshot without requiring a click.
- [ ] **Screenshot timing control**
  Choose pre-click, post-click, or delayed capture.
- [ ] **Autosave and quota warnings**
  Prevent browser storage limits from destroying work.

EDITING AND PRIVACY

# Make every captured step fixable.

- [ ] **Undo and redo**
  Cover capture deletion, ordering, text, and image edits.
- [ ] **Complete screenshot editor**
  Crop, zoom, blur, redact, draw arrows, add boxes, and place text.
- [ ] **Edit click targets**
  Move, resize, recolor, or remove the click highlight.
- [ ] **Replace screenshots**
  Swap one image without rerecording the workflow.
- [ ] **Bulk step operations**
  Select, delete, merge, duplicate, or reorder many steps.
- [ ] **Encrypted local database**
  Replace oversized localStorage records with durable project storage.
- [ ] **On-device PII redaction**
  Detect sensitive text and blur it before cloud transmission.
- [ ] **Domain allowlists**
  Let teams define where capture is permitted or blocked.
- [ ] **Sensitive-field warnings**
  Warn near password, payment, health, and identity fields.
- [ ] **Permanent deletion controls**
  Delete one capture, one guide, or all stored data.

GUIDE STRUCTURE

# Help guides stay useful as work changes.

- [ ] **Sections and reusable blocks**
  Add headings, callouts, warnings, and shared content.
- [ ] **Merge and split guides**
  Combine captures or divide one long process.
- [ ] **Conditional branches**
  Document multiple valid paths in one guide.
- [ ] **Variables**
  Reuse names, environments, and customer-specific values.
- [ ] **Templates**
  Start from SOP, onboarding, troubleshooting, and support patterns.
- [ ] **Folders, tags, and search**
  Organize large libraries without enterprise-only restrictions.
- [ ] **Version history and restore**
  Show visual differences and recover prior releases.
- [ ] **Stale-guide detection**
  Flag likely UI changes, broken links, and missing elements.
- [ ] **Recapture one step**
  Refresh one instruction instead of repeating everything.
- [ ] **Portable project ZIP**
  Include original and edited images, HTML, Markdown, JSON, and a manifest.

SHARING AND BUSINESS MODEL

# Remove friction for viewers and teams.

- [ ] **Cloud-backed share links**
  Replace browser-local links with durable publishing.
- [ ] **Account-free viewing**
  Never force recipients to register before following a guide.
- [ ] **Sharing controls**
  Add passwords, expiration dates, and email-domain restrictions.
- [ ] **Knowledge-base embeds**
  Support Notion, Confluence, Hudu, Zendesk, and help centers.
- [ ] **Comments and outdated-step reports**
  Let viewers identify confusing or stale instructions.
- [ ] **Free viewers**
  Charge creators or workspace usage—not every recipient.
- [ ] **Mixed workspace roles**
  Allow free and paid roles together.
- [ ] **Transparent checkout**
  Show full monthly, annual, and renewal costs before purchase.
- [ ] **Self-service billing**
  Support upgrades, downgrades, cancellation, and refunds.
- [ ] **Custom branding**
  Do not hide basic brand control behind an enterprise contract.

EXPANSION ROADMAP

# Scale only after trust is earned.

### Capture expansion

Desktop applications, voice narration, optional video, translation, and in-app Guide Me playback.

### Learning layer

Completion analytics, drop-off analysis, training assignments, due dates, and reminders.

### Accessibility

Keyboard-only playback, alt text, semantic exports, and contrast checks.

### Developer platform

API, webhooks, integrations, and MCP access.

### Controlled AI

Audience-aware rewriting, confidence indicators, original evidence, and batch approval.

### Optional cloud

Encrypted synchronization that never removes local ownership.

## Next sprint recommendation

Build event checkpoints, pause/resume recovery, visible error states, accidental-click filtering, manual capture, and undo/redo before adding more AI.
